<i>Material Technical Overview</i>	<i>Tensile Strength</i>	<i>Flexural Strength</i>	<i>Compressive Strength</i>	<i>Heat Deflection</i>	<i>Shore D Hardness</i>
<b>Urethane Resin</b>	<b>7,660 psi</b>	<b>10,230 psi</b>	<b>11,400</b>	<b>212 degrees F</b>	<b>80</b>

This particular grille was made for foundations and crawl spaces. Both parts are cast from an exterior grade urethane resin that won't rot, rust, corrode or grow mold. The grille can be removed by removing the knurled knobs, in order to seal off the foundation in the late fall by inserting a plate behind the grille, or to put in a screen behind the grille in the spring to allow ventilation in to the crawlspace. All installation hardware included.

Each foundation grille is offered in 11 different finishes. Most of our finishes starts with a thin plate of either a metallic powder as in Rubbed Bronze, Dark Bronze, Antique Brass, Aged Copper, Nickel and Pewter , or a pigment as in Chinese Red, Antique Cherry, Old Wood, Old Wood Gold, and Umber Gold. During the casting process the powders or pigments bond to the resin. This process is similar to powder coating, but uses a chemical bonding process rather than by an electromagnetic charge . Then aging glazes or painted highlights are applied to create the specific look of each particular finish. Our unique finishing process not only creates great looking faux-finishes, but forms a tough durable finish for years to come.
