Radiator Cabinet Design 41" tall x 43" wide x 10-1/2" deep To
Cover Radiator 37" tall x 37" wide x 7-1/2" deep
features Louis XIV Grille RR-203 20x30LT 22" tall x 32" wide

The cabinet can be made from pre-painted stock lumber purchased from Home Depot or Lowes. It will look best if the grille is installed sunken into the surrounding stock lumber, rather than on top of the stock boards. 1/2" plywood strips can be used on the back of the stock lumber front to allow the grille to be installed sunken into the surrounding stock lumber

Also you can add quarter round, cove molding or decorative egg and dart molding under top board for extra detail.
