## ***Radiator Cabinet Design*** 41-3/4" tall x 25" wide x 12" deep

***To Cover Radiator 37-1/2" tall x 22" wide x 9" deep***

***features Louis XIV Grille RCG-203 24x14LT 26" tall x 16" wide.***

The cabinet can be made from pre-painted stock lumber purchased from Home Depot or Lowes. It will look best if the grille is installed sunken into the surrounding stock lumber, rather than on top of the stock boards. 1/2" plywood strips can be used on the back of the stock lumber front to allow the grille to be installed sunken into the surrounding stock lumber.

Also you can add quarter round, cove molding or decorative egg and dart molding under top board for extra detail.
